

Supplying power solutions in extreme environments

In Belgium and abroad, the continuous operation of petroleum customers demands extremely reliable facilities.

Eneria is specialised in the maintenance of Caterpillar® engines and provides its extensive expertise to offshore and onshore and gas industry throughout the world : drilling, gas compression, production, well servicing

Preventive maintenance:

- Maintenance program based on the number of operating hours

Supply of genuine or reconditioned spare parts

- Availability and responsiveness of the global Caterpillar network partnered by Groupe Monnoyeur or Eneria

Diagnostics: trouble shooting and analysis

- Oil analysis programs to identify and interpret the events affecting your engine's health
- An expert intervention and service team with the ability to adapt to local conditions and constraints worldwide
- Our teams possess all the requisite qualifications and equipment for working in high-risk areas (risk of explosion, sea survival training, self-contained breathing apparatus use, ...)

Repairs

- All electrical, electronic and mechanical work required for your facility

Reconditioning or certified rebuilt engine

- Reconditioning of your engine in our specialised workshop or on site (provides your engine with a new lease of life)

Optimise your systems

- Know how and expertise (adjustments, settings, ...) to ensure you get the best possible performance out of your engine

Multi-level maintenance contract: from annual inspection to full service

- Annual or regular visits
